Ph.D.

Sabra Lewsey, M.D.,
M.P.H.

Yolandra Hancock, M.D.,
M.P.H.

Revolutionizing Women's Heart Health through Artificial Intelligence and Digital Health

Artificial intelligence (AI) has increasingly become a part of our daily lives, but how can it be used to improve women's heart health? Heart disease is the leading cause of death among women, yet many of these conditions remain underdiagnosed or misdiagnosed due to gender-specific factors and a lack of personalized care. Join Johns Hopkins Medicine and the American Heart Association as we explore the innovative role AI and digital health and the impact on women's health. Our panel discussion will highlight how cutting-edge technologies are bridging health care gaps and paving the way for more accurate, accessible and individualized health care solutions.
